# IshpreetOS Rough Design

July 13, 2026

## Design Ideas:

- OS inspired personal portfolio, taking a look into my desktop
- all parts of the website are the icons on the desktop
- Windows XP inspired, taking that icon and text style with bottom taskbar
- Whenever an icon is pressed it opens a window that can be resized and adjusted as needed, with full screen support and can be dragged around screen with the ability to be minimized in the taskbar
- time and date on right hand side of taskbar
- before getting into the website, a small loading screen appears that says "Loading IshpreetOS" with a loading bar that loads for 2 seconds and then puts you right on the desktop
- give a settings icon from where the user can change the accent colour and background of the desktop with it updating in realtime on the site
- All screen size friendly design
- Icons on right side, not the left with the mac style minimize, close, and full screen / window buttons (green, yellow, red)
- Maybe a cmd prompt where the user can enter in certain commands for easter eggs
- Make a section in about me page where users can send you movie, show, and book recommendations which are emailed straight to you
